Argument and Evidence

The council should extend evening library hours.

This is the author's central proposal.

A survey of 120 learners found that 84 preferred later access.

The survey describes preferences, not measured examination gains.

The author assumes that access enables independent study.

Whether that assumption holds depends on staffing and attendance.

A critic argues that longer opening hours increase staff costs.

The author replies that a limited pilot could test attendance.

An earlier paragraph says the pilot costs 2000 units.

A later note estimates 2500 units; the inconsistency is unresolved.

Passage	Role explicitly named
Central proposal	Claim
Survey result	Evidence
Access assumption	Warrant
Staff cost objection	Counterargument

Two readings remain possible: fairness or academic opportunity.

A qualified reader must review the proposed reasoning relationships.
